Hi Pranav,
Sorry that we missed the previous email about the repo creation.
There's already a repo named as exp-context-switch-iiith in the virtual-labs organization. Naming the new repo as exp-context-switching-iiith will be confusing. Is this new repo going to be very different from the existing one? Please let me know if a better name can be given to the new one.
Also, should we create a repo for the process life cycle management experiment too? We can name it exp-process-life-cycle-iiith.
Please confirm and we will have the repos created right away.

@Ravi Kiran Please create these repos on priority.

best regards
raj

Sir,
Yes, we would like to migrate the first experiment to exp-process-life-cycle-iiith eventually, but we'd like to keep the references to the previous repo exp-context-switch-iiith valid as well, for any official (review) documentation that might include those links (unless you can help us redirect older links to the newer ones). So the confusing names are temporary, I hope, and we can deprecate exp-context-switch-iiith when appropriate.

Although that can wait, we need a new repo (exp-context-switching-iiith) quite urgently.

So it'd be helpful to have two new repos:
1. exp-process-life-cycle-iiith
2. exp-context-switching-iiith

And deprecate but preserve the current exp-context-switch-iiith.

Thanks.
